Science: Earth Explorers

GOCE, SMOS, CRYOSAT, SWARM, AEOLUS, EARTH CARE, FLEX, BIOMASS, CLOUD, AEROSOL & RADIATION, FLEX, CRYOSAT, BIOMASS

Earth Explorer 9 – Two Candidates

Mission selection 2019; launch around 2025

FORUM

Far-infrared Outgoing Radiation
Understanding and Monitoring

Benchmark measurements will improve our understanding of the greenhouse effect and contribute to climate change assessments accuracy

SKIM

Sea-surface Kinematics
Multiscale monitoring

Will carry novel wide-swath scanning multibeam radar altimeter to measure ocean-surface currents with Doppler technique

Earth Explorer 10 – Three Candidates

STEREIOD

Bistatic SAR as passive followers of Sentinel-1
Two <500kg spacecraft

Applications

- Cryosphere
- Oceanography
- Geosphere

Daedalus

Explore mesosphere, lower thermosphere & Ionosphere

Four cubesats at 120 km altitude

Focus on temperature, heating processes & composition structure

G-CLASS

Science on daily water cycle

Geostationary C-band SAR

Benefits for weather forecasting, hydrology, mountain cryosphere

Doppler Wind Lidar:

- Operated in the UV, measuring winds in cloud free atmosphere, in optically thin cloud/aerosol layers, and on top of optically thick clouds

Orbit:

- Sun synchronous, 6 am/pm local time, 320 km altitude
- 7 day repeat cycle, 111 orbits per week

Products:

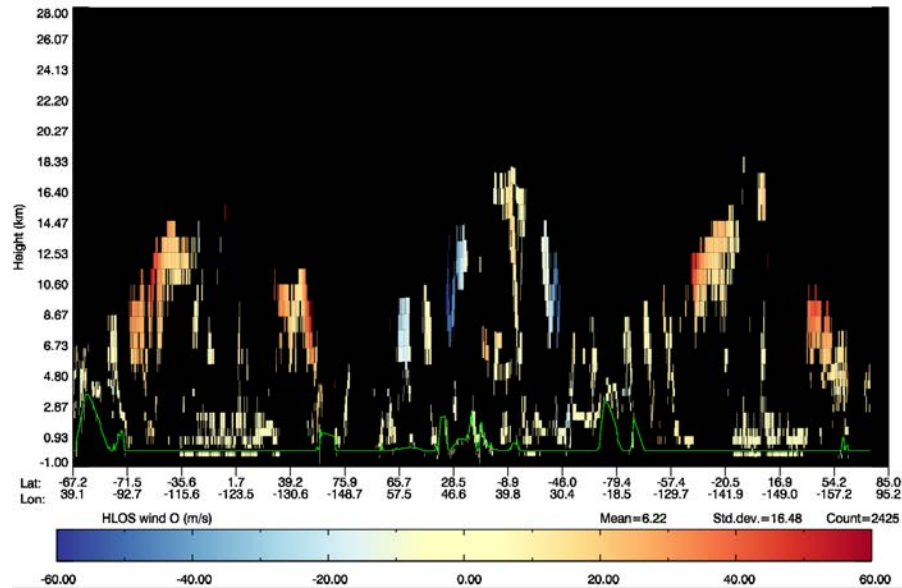

Level-2A: backscatter and extinction coeffs => cloud/aerosol vertical structure and properties

Level-2B: Profiles of single component wind vectors ($\sim u$)

- 24 layers: surface to 30km
- horiz. res. 85 km (Rayleigh) and 10 km (Mie)

Level-2C: ECMWF-assimilated wind vectors

Courtesy Michael Rennie, ECMWF

Essential Climate Variables (ECVs)

United Nations

Framework Convention on
Climate Change

Measurement domain	Essential Climate Variables
Atmospheric	<p>Surface: air temperature, wind speed and direction, water vapour, pressure, precipitation, surface radiation budget</p> <p>Upper-air: temperature, wind speed and direction, water vapour, cloud properties, Earth radiation budget, lightning</p> <p>Composition: carbon dioxide (CO₂), methane (CH₄), other long-lived greenhouse gases, ozone, aerosol, precursors for aerosol and ozone</p>
Oceanic	<p>Physics: temperature: sea surface and subsurface; salinity: sea surface and subsurface; currents, surface currents, sea level, sea state, sea ice, ocean surface stress, ocean surface heat flux</p> <p>Biogeochemistry: inorganic carbon, oxygen, nutrients, transient tracers, nitrous oxide (N₂O), ocean colour</p> <p>Biology/ecosystems: plankton, marine habitat properties</p>
Terrestrial	<p>Hydrology: river discharge, groundwater, lakes, soil moisture</p> <p>Cryosphere: snow, glaciers, Ice sheets and Ice shelves, permafrost</p> <p>Biosphere: albedo, land cover, fraction of absorbed photosynthetically active radiation, leaf area index, above-ground biomass, soil carbon, fire, land surface temperature</p> <p>Human use of natural resources: water use, greenhouse gas fluxes</p>

ESA UNCLASSIFIED - For Official Use

European Space Agency

- Established 2010
- €160M
- 21 ECVs in total
- Operational production of 13 CCI ECVs has been transferred to C3S

ESA UNCLASSIFIED - For Official Use

European Space Agency

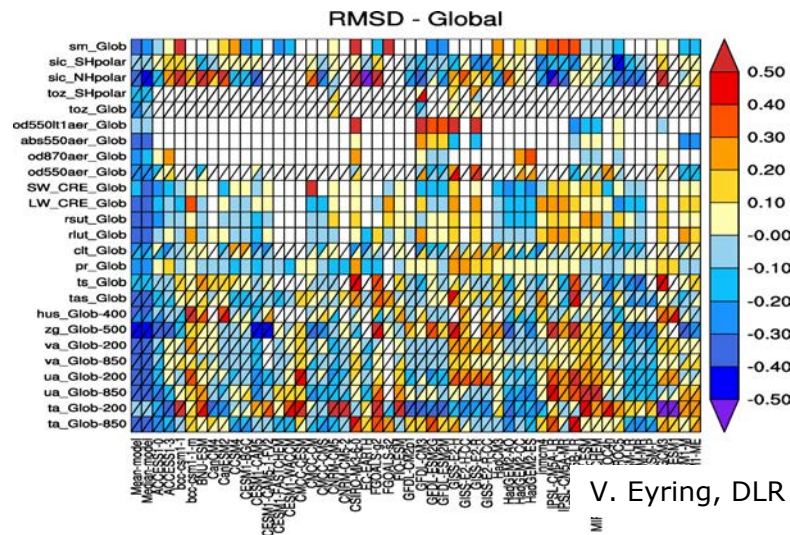

Climate Modelling User Group (CMUG)

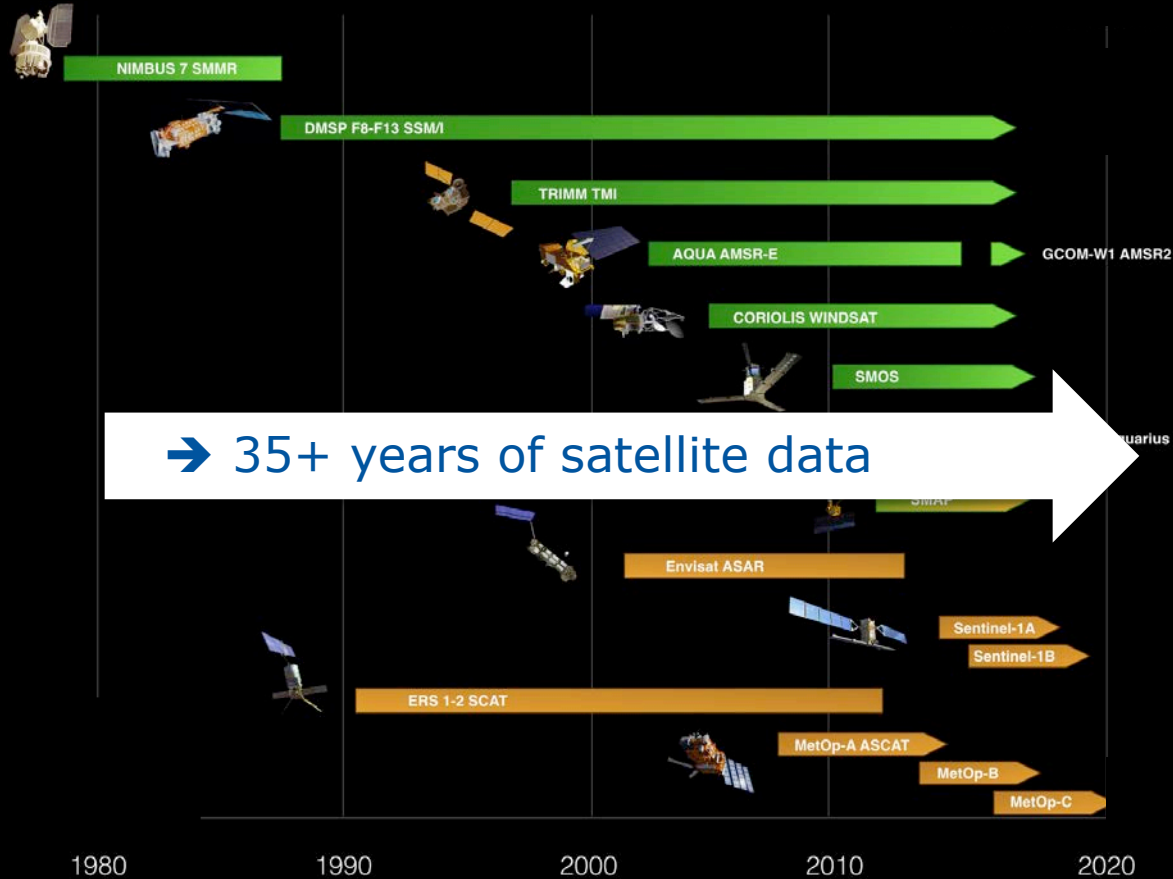

Hadley Centre, DLR, ECMWF, BSC,
Meteo France, MPI-Met, IPSL, SMHI

Provides feedback to CCI projects on:

- Climate science user requirements
- ECV product specification
e.g. product uncertainties
- Independent assessments of using CCI data
in modelling studies: verification, assimilation, etc.
- Cross-ECV consistency

Exploiting the satellite archive – Soil Moisture ECV
