

Surface Incoming Solar Radiation Over Egypt , Climatological Study

S.A.Asklany

HIGHER INSTITUTE OF TECHNOLOGY, Department of
Computer Science. Tenth of Ramadan City, Egypt
CRTC, Egyptian Meteorological Authority, Cairo Egypt

Objectives

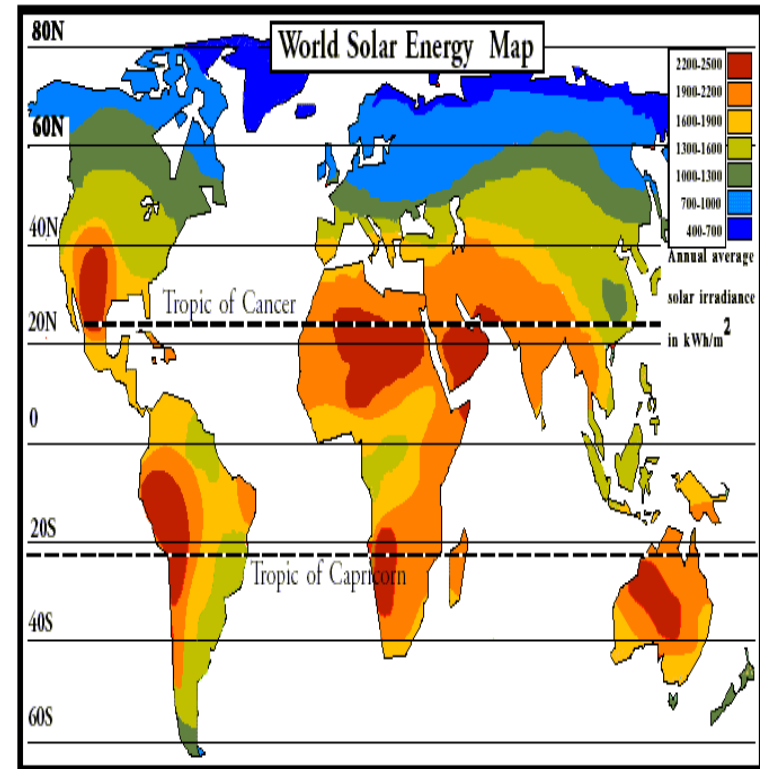

-  ***CM SAF PRODUCTS AND DATASETS..**
- *WHY WE CHOOSE SIS**
- *TWO YEARS MONTHLY MEAN DATA TO
SHOW THE SIS TIME SERIES**
- *WORK ON DAILY MEAN DATA FOR
CHAOTIC TIME SERIES PREDICTION**

By Studying the solar radiation calculations and examining radiation measurements, we can:

- *gain a better understanding of many physical cycles and concepts associated with the Earth system.

- *Climate variation and seasonal change of radiation can give a global idea in the development of renewable energy field was considered

ANFIS in Chaotic Time Series Prediction

Time series can be applied in wide variety of applications. The prediction of future values based on past and/or present information. Many established methods in time series prediction has been published.

In time series analysis, there are two main goals: First, determining the nature of the phenomenon represented by continues observations, second prediction future values (Hamilton, James D 1994).

The non-linear system in which the output has high degree of sensitivity to the initial conditions is considered having chaotic behavior (Casdagli, 1992).

The delay differential equations (DDEs) can describe mathematically this chaotic behavior

From the most commonly used DDE is the Mackey-Glass model (Glass and Mackey, 1988) which was introduced as a model for the production of white blood cells then used in many time series problems (R.N.Yadav , P.K. Kalra, J. John, 2007). The model is given by the following equation:

$$\frac{dx}{dt} = Ax_{\tau} \frac{\theta^n}{\theta^n + x_{\tau}^n} - Bx$$

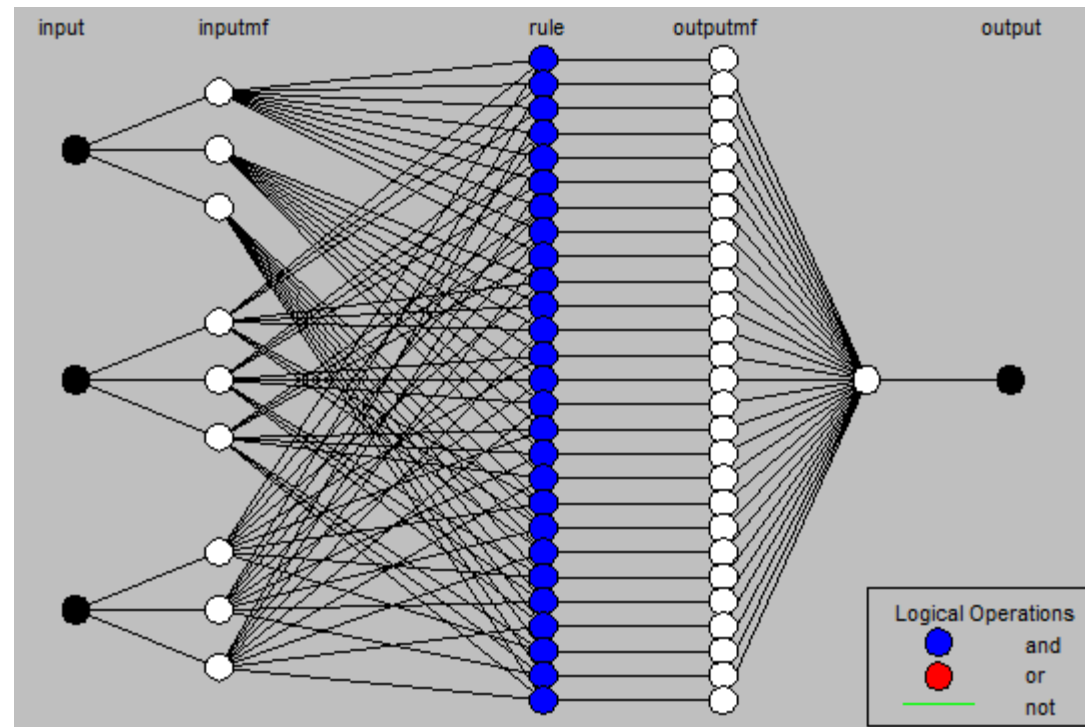

Where A, θ and n are parameters. For $\tau > 17$, this equation is known to exhibit chaos

Adaptive Neuro Fuzzy Inference system (ANFIS)

*ANFIS introduced by Jang (1993) can use for constructing a set of fuzzy IF-THEN rules with appropriate membership functions

- generate the input-output pairs.
- Since, the membership functions are changed through the training process to get good results (Ciji Pearl Kurian et al., 2006).
- The membership function pattern used for the input series in this work is gebell shape
